

New Product Information

VHF Transceiver IC-F3101D

UHF Transceiver IC-F4101D

IDASTM
ICOM DIGITAL ADVANCED SYSTEM

Rugged
MIL-STD 810

IP54

Icom Canada proudly announces the debut of the IC-F3101D/F4101D series. This series is compatible with IDAS NXDN. It is also compatible with IDAS multi-site conventional and IDAS single-site trunking. The IC-F3101D series provides selected functions which do not require an LCD and keypad. It will be an even more affordable digital migration path for business and industry users.

The F3101D series was developed based on the IC-F3001 series. Analog functions and physical capabilities (built in 2-tone/5-tone, 800mW loud audio, MIL-STD 810, IP54) are retained from the IC-F3001 series. Most of the accessories (batteries, chargers) are also shared with the F3001.

In addition the channel announcement function is built in to the F3101D radios.

Major Selling Points

- **IDAS NXDN compatible/analog**
- **Channel Announcement**
- **800mW loud and intelligible audio**
- **IP54 and MIL-STD-810-F rugged body**
- **Simple Operation for instant communication**
- **Low consumption current for longer operating time**
- **CTCSS/DTCS tone encoder/decoder built in**
- **2-Tone, 5-Tone, encoder/decoder built in**
